

What is claimed is:

1. A bulky paper comprising polyacrylamide which has an electric charge of 2.0 m-equivalent/g or less at pH2 and also 2.0 m-equivalent/g or less at pH12.

5 2. The bulky paper as described in Claim 1, further comprising an amorphous silica or amorphous silicate with a specific bulk density of 0.3 g/ml or less as a filler.

3. The bulky paper as described in Claim 1, further comprising a bulk-increasing agent comprising a fatty-acid polyamide compound or a bulk-increasing agent comprising an ester compound of a polyhydric alcohol and a fatty acid.

10 4. The bulky paper as described in Claim 1, further comprising a mercerized pulp or bridged pulp.

5. The bulky paper as described in any one of Claims 1 through 4, wherein a relative bonding area of said paper containing polyacrylamide is 1.2 times a relative bonding area of a paper not containing polyacrylamide, or less.
